GET DEEP ANALYSIS AND DEDICATED SUPPORT WITH ACTIVEEYE ADVANCED THREAT INSIGHTS

PROACTIVELY IDENTIFY POTENTIAL THREATS

Security alerts and other system and network health indicators don't always reveal the whole picture of your security posture, even when you're looking for anomalies. Proactively searching for threats that may be targeting your agency or organization can help you better prepare for potential issues you wouldn't see otherwise and respond to them sooner.

GO BEYOND EVENTS AND ALERTS

ActiveEye Advanced Threat Insights (ATI) extends the standard Security Operations Center (SOC) monitoring provided by our Managed Detection and Response (MDR) services. It broadens the scope beyond investigating and responding to alerts, giving you detailed visibility into threats targeting your agency or organization and access to a dedicated expert who will help you shape your cybersecurity program going forward to reduce future risk.

Advanced Threat Insights includes dedicated security analyst hours, monthly reviews and access to threat intelligence sources. It offers valuable awareness of new and existing threats and how they relate to your environment, even if they are not currently producing security alerts. In turn, this knowledge can improve your organization's cybersecurity posture by lowering risk and increasing the value of existing controls and investments, including MDR services.

KEY CAPABILITIES

TREND ANALYSIS AND THREAT HUNTING

Our ActiveEye security platform uses a wide array of analytic techniques to detect threats at all points in the kill chain. No automated analytics can detect every threat, though, especially those designed to evade existing security controls. However, human review can identify trends that indicate threat actor intent. If a threat is detected, an expert analyst will manually investigate your environment in a process known as threat hunting. This can uncover previously undetected threats that exist outside of the scope of typical MDR alerts, and provide a starting point for remediation and security recommendations.

SURFACE, DEEP AND DARK WEB SEARCHES

Risks go beyond the boundaries of your organization and visibility. Monitoring for key assets on the surface, deep and dark web provides actionable insights into how your organization is being targeted and what assets are at risk. For example, certain servers may contain sensitive customer data. Other assets may behave in unique ways or have specific, targeted attacks against them. Areas of monitoring include credential loss or exposure, exposed sensitive data, agency targeting and system targeting.

DEDICATED SECURITY ANALYSTS

The Motorola Solutions SOC has experienced, highly-trained and certified security professionals staffed 24/7 dedicated to monitoring mission- critical systems. As part of our Advanced Threat Intelligence service, named analysts dedicated to understanding your account will build and maintain an intimate knowledge of your environment, delivering tailored security recommendations each month.

MONTHLY REVIEW AND RECOMMENDATIONS

Each environment is different. From the specifics of the network architecture, to the types of endpoints, to the applications running, having a complete understanding of the environment and marrying that understanding to an intimate knowledge of emerging and existing threats is vital to protecting critical resources. Each month, your dedicated analyst will provide specific recommendations for your organization in a status review meeting.

MOTOROLA SOLUTIONS — YOUR TRUSTED PARTNER

As a leading provider of mission-critical solutions, we understand your mission can only be as secure as your partners enable you to be. Our goal is to provide you with transparency, accountability and security that's built-in from the start.

We believe that our set of highly knowledgeable people with industry certifications, best-in-class organizational policies and procedures and state-of-the-art automation and analytics tools enables us to uniquely deliver enhanced cybersecurity solutions that address your needs today and in the future.
